Bringing Geraniums Indoors

When deciding if you want to attempt wintering over our annual plants such as Geraniums, you must ask yourself a few questions:

- Do you have the correct light?
- Do you have

enough space?

Is your effort worth it?

If you answered yes to all three, this article is for you.

Steps to successfully winter over Geraniums:

1. Inspect your plant for bugs and diseases prior to bringing indoors. If there is evidence, be sure to treat to prevent the spread to other indoor plants.

2. Remove all brown and crunchy leaves, typically found toward the base of the plant. Prune the plant back by 1/3.

3. Place in high light area. A plant that is placed three feet from a window will receive 50% less light. Geraniums want as much light as possible.

4. Air movement and dry air are appropriate for Geraniums. They will be more prone to disease issues such as rust when placed in a high humidity environment.

5. Water well - the soil must be a well-drained mix that will not hold too much moisture. If the plant is over watered throughout the winter, root rot will become a serious problem.

Geraniums can handle cooler temperatures. As long as the area stays above 50 degrees with high light, your plants should come out of the winter a little leggy, but overall healthy.

Weekly Specials: October 19th - End of Season

50% Off:

All Shrubs and Evergreens - now includes new Pyramidal Arborvitae All Perennials All Veggie Seed All Gift Items

Sale does not apply to previously purchased material.

Guarantee is void when shrubs/evergreens are purchased on sale. Perennials are never guaranteed.

Plan Ahead for Your 2021 Veggie Garden

Stop in today to save money for your 2021 garden. Many kinds of garden seeds can be saved for a few years with

excellent germination rate and viability. Store your seeds in a cool, dark, dry location.

Our remaining bulk flower and veggie seeds are 50% off through the end of the year. If 2021 will be anything like this year, buy your seeds early and plan ahead. We are happy to answer questions on best growing locations and different varieties available. While you are shopping for seeds, don't forget the importance of pollinators! Scoop up some perennials to plant near, or in, your veggie garden to draw our pollinators in. All perennials are remaining 50% off through the end of the year. Don't be nervous, it's still a great time to plant perennials.

 Marjoram Onion Oregano 	• Parsley • Parsnips	7 year	When properly stored, most garden seeds will heep & rema viable (alive & able to grow) f number of years.
 Chives Leek Okra Peanut 	 Pepper Sage Sweet Corn 	2 years	Seeds are best stored in 1 cool, dry, dark location w less than 10% humidity. Germination rates of seed
 Asparagus Bean Broccoli Carrot Celery 	 Fennel Kohlrabi Pea Spinach Tomatillo 	3 yea	decline over time. Be sure to check the germination rate of your stored see each year!
 Beet Brussel Sprouts Cabbage Cauliflower Eggplant 	Kale Mustard Radish	Summer Squash Swiss Chard Fomato Furnip Winter Squash	4 years
 Artichoke Arugula Basil Cilantro 	Cucumber Dill Lettuce & Greens Melon		5 years
